## Contents

1	Introduction and outline	9
2	Liver fibrosis during the development of biliary atresia: proof of principle in the murine model.	23
3	Cholangiocytes do not undergo epithelial to mesenchymal transition in biliary atresia related liver fibrosis.	37
4	Aspartate Transaminase to Platelet Ratio Index is not correlated with severity of fibrosis or transplant-free survival in children with biliary atresia	53
5	Health status and quality of life in adult biliary atresia patients surviving with their native livers	65
6	Overall quality of life in adult biliary atresia survivors with or without liver transplantation: results from a national cohort	79
7	Achievement of developmental milestones in young adults after liver transplantation in childhood	95
8	General discussion	109
9	Appendix:	125
a.	Summary & samenvatting	127
b.	Dankwoord	139
c.	Lijst van publicaties	141
d.	Over de auteur	143
